

A young boy with brown hair is lying on his back on a large, blue, beanbag-like cushion. He is wearing a white t-shirt with a graphic and dark jeans. He is looking towards the camera with a neutral expression. The cushion is on a light-colored surface.

AAT Vacuum Posture Stabilisation Cushions Infinitely Re-mouldable At Home

AAT posture cushions use vacuum technology so they precisely fit, support and correct the positioning of the user - and hold that shape for as long as needed!

The idea was first developed when our partner required a solution for his disabled child that enabled quick changes in shape and firmness for effective 24-hour postural management - but could not find anything on the market!

Vacuum technology means our cushions hold their form whilst being easy to reconfigure in seconds. This assures continued stabilisation and comfort whilst compensating for asymmetry and/or muscle weakness.

Today, we offer everything from a small cushion to support your arm to a full-size mattress, assuring correct body stabilisation, alignment and comfort whatever seated activity is being undertaken - whether just a break from a wheelchair to abseiling, sailing or flying.

Why choose AAT vacuum posture cushions

- Hassle-free: no need for frequent re-plumping necessary with conventional cushions. The vacuum technology holds the moulded shape for months! No need for the delay and cost of a new fixed mould - we show you how to remould without pressure points as you need.
- Quick and easy: to fix the shape, mould to the required shape, use the handy pump (hand or electric versions available) to remove the air. Voila, the shape is fixed! To re-shape, just allow a little air back into the cushion and repeat.
- Instantly re-mouldable: because you can re-shape yourself, comfort is constantly assured.
- Infinite possibilities: whatever precise contouring is required can be achieved - just form pommels, asymmetrical wings, and channels to accommodate pegs and feeding tubes.
- Optimal practicality: our cushions can all be wiped clean and disinfected. Size allowing, they can be popped into the washing machine (see care instructions).
- Support that goes the distance: our free no-obligation assessment considers all aspects, such as home environment, user and 'operator'. We personally show you how to configure the cushions so you are comfortable re-moulding without causing pressure points. And if you can't find a standard shape that works for your precise requirements, we'll do our best to make it for you.
- Proven in practice: our vacuum posture cushions have been used by professionals and individuals alike for 20 years.

Key features:

- Extensive range of shapes and sizes as standard
- Sensory: the tactile covering "hugs" the user. The bean construction transmits vibration.
- Hygienic: the advanced neoprene surface is waterproof and breathable. It just wipes clean and air-dries quickly, or pop in the washing machine.

Find the right vacuum posture cushion for you:

- **Chilli Bean** - the infinitely adjustable orthopaedic "big blue hug".
- **Comfortable Plus Duo** - the "go anywhere" body support for head, body and limbs (approved by British Airways for in-flight use).
- **Aqua Liberty** - fits almost any bath, providing correct support for almost any user!
- **Grande** - mattress-size with infinite shaping.
- **Bagel** - supporting water freedom.
- Plus numerous others. **We can develop bespoke options for your specific needs.**
